LIST OF TYPE SPECIMENS OF DROSOPHILIDAE (DIPTERA) IN THE COLLECTIONS OF THE ZOÖLOGICAL MUSEUM AMSTERDAM

Gerhard Bächli

ABSTRACT

The collection of Drosophilidae contains 358 type specimens of 122 species out of 23 genera. 74 of these species were described by De Meijere. With few exceptions the flies were collected in Indonesia. A list of the type specimens is given.

INTRODUCTION

One of the leading dipterists at the beginning of this century was J.C.H. De Meijere who described hundreds of species from specimens mainly collected in the then Netherlands Indies now Indonesia. Descriptions of 76 new species of Drosophilidae were included by him in several papers between 1906 and 1924. The collections established by him are now kept in the Zoölogisch Museum Amsterdam.

In addition to 74 species described by De Meijere the collection now contains type specimens of 48 species described by the following authors: Bächli, Carson and Okada, Duda, Okada, Tsacas and Chassagnard, Villeneuve, and Van der Wulp. These authors made descriptions based on specimens owned by the Zoölogisch Museum, or sent type specimens to the Museum as a gift.

The following list contains 358 type specimens of

122 species, which are arranged in alphabetical order. In total there are 23 holotypes, 26 paratypes, 16 lectotypes, 42 paralectotypes, 1 neotype and 250 syntypes. For species described before 1970 the essential details of collection sites and number of specimens are cited. The type specimens recorded are listed with details of the labels, as far as is considered to be essential. Different labels are separated by a slash (/). Remarks on the status and the condition of the type specimens are added where needed. New lectotype designations are indicated in uppercase letters. In addition some comments are given, especially on the systematic position and synonymy. These data are based on the catalog of Wheeler (1981).

Compared with the original data given by De Meijere the type collection is nearly complete. Some additional specimens are found in the Zoological Mu-

seum Berlin (Bächli, 1984a), in the Hungarian Natural History Museum, Budapest (Bächli, 1984b), and in the Rijksmuseum voor Natuurlijke Historie, Leiden (unpublished).

I wish to express my thanks to Dr. P. Oosterbroek and B. Brugge of the Zoological Museum Amsterdam, for the permission to work in the collection and for helping me in solving special problems.

Comment: This species is now included in *Leucophenga*. I
was unable to find out the publication date of the de-
scription by De Meijere. Duda (1924a) included a key
description of this species, as "*argentina* De Meijere

SYSTEMATICALLY ARRANGED LIST OF SPECIES

The species are listed in the original as well as in the present generic affiliation. Synonyms are given in parentheses.

Acletoxenus : *meijerei*
Amiota : *maculiceps, parallelinervis, varipes*
Amphoroneura : *obscura, rufithorax*
Camilla : *coeruleifrons, javana, pusilla, rugulosa*
Chymomyza : *cinctifrons, obscura, rufithorax*
Colocasiomyia : *cristata*
Curtonotum : *angustipenne*
Dettopsomyia : *acrostichalis, jacobsoni, pictipes, preciosa*
Discomyza : *punctipennis*
Drosophila : *abbreviata, albiceps, albicincta, albicornis, albincisa, albolimbata, albonotata, alternata, amabilis, angusta, angustipennis, argentata, argentina, atropyga, baseogrisea, bicolor, binotata, bistrata, brunnea, cincta, colocasiae, convergens, deflexa, dentata, flavissima, frontata, gibbosa, gracilis (= eugracilis), gratiosa, hirsuta, hirticornis, hypopygialis, inconspicua, isatoidea, jacobsoni, latifascia, limbipennis, lineolata, lugubrina (= littoralis), maculiventris, maura, menisigra, metallescens, minuta (= hirtominuta), montium, nigra De Meijere (= meijerei), nigra Duda (= hirtonigra), nigrofemorata, obscurata, ochrifrons, ornatipennis, parabrunea, paradentata, pictipes, pictula, pilicrus, plurilineata (= busckii), poecilogastra, preciosa, pressobrunnea, pugionata, pumilio, punctipennis (= lurida), quadrilineata, quadripunctata, quadriradiata, quadriseriata, ruberrima, salati-gae, scutellaris, semiatra, seminigra, senilis, separata, silvata, simplex, strigifrons, subfasciata, sublineata, subpollinosa, sumatrensis, tectifrons, tijbodas, trifasciata, trisetata, tristipes, ungarensis, unicolor (= monocolor), ustulata, xanthogaster*
Drosophilella : *alocasiae, colocasiae, pistilicola, stamenicola, xenalocasiae*
Hypselothyrea : *dimidiata, guttata*
Leucophenga : *abbreviata, albiceps, albicincta (= albofasciata), argentata, argentina, cincta, gibbosa, limbipennis, maculiventris (= bellula), ornatipennis (= ornata), quadripunctata, salati-gae, subpollinosa*
Liodrosophila : *coeruleifrons, contracta, pusilla, rugulosa*
Lissocephala : *bicolor, binotata, metallescens*
Microdrosophila : *bimaculata, frontata, tectifrons*

Mycodrosophila : *albicornis, amabilis, gratiosa, separata*
Paradrosophila : *flavissima, quadriradiata*
Paramycodrosophila : *pictula*
Pararhinoleucophenga : *maura*
Phortica : *maculiceps, parallelinervis, varipes*
Phorticella : *bistrata, fenestrata*
Protostegana : *annulosa*
Scaptomyza : *bimaculata, substrigata*
Sphaerogastrella : *javana*
Sphymocephala : *brunnea*
Stegana : *annulosa, brunnescens (= lateralis), convergens, lineata, nigrifrons, obscuricornis, scutellata, undulata*
Tanygastrella : *gracilis, hypopygialis*
Zaprionus : *lineatus (= multistriatus), obscuricornis*
